Single-use air supplied suit is a highly specialized protective equipment designed for extremely hazardous environments. It combines the convenience of single - use with air - supplying protection features. The suit body is usually made of lightweight yet durable materials, providing excellent sealing. The air supply system, connected to the suit through reliable connection devices, can continuously and stably supply purified air to the user, ensuring respiratory safety. In extremely dangerous scenarios such as chemical leaks, bio - virus contamination, and radioactive substance handling, it effectively isolates external toxic and harmful substances, preventing them from invading the human body through the respiratory tract. Moreover, the single - use design allows for direct disposal after use, avoiding the risk of cross - contamination. Although it is single - use, it plays an irreplaceable role in critical protection moments. However, its use comes with relatively high costs and strict requirements for the use environment and operation specifications.
