According to our LPI (LP Information) latest study, the global Single-use Bioprocessing Equipment market size was valued at US\$ 8818.9 million in 2023. With growing demand in downstream market, the Single-use Bioprocessing Equipment is forecast to a readjusted size of US\$ 31070 million by 2030 with a CAGR of 19.7% during review period.

The research report highlights the growth potential of the global Single-use Bioprocessing Equipment market. Single-use Bioprocessing Equipment are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Single-use Bioprocessing Equipment. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Single-use Bioprocessing Equipment market.

Single-use Bioprocessing Equipment refers to biopharmaceutical manufacturing (bioprocessing) equipment designed to be used once (or for a single manufacturing campaign) and then discarded. Generally, SUS equipment is composed primarily of plastic components that have been sealed and sterilized using gamma irradiation. The primary benefits of SUS versus classic stainless steel (or glass less frequently used in bioprocessing) is that the equipment comes sterile, allowing avoidance of cleaning, sterilization and validation of sterilization prior to usage; and avoidance of related complex steam, WFI, and other plumbing installed throughout bioprocessing facilities with large fixed stainless steel components.

The increasing usage of single-use products in upstream bioprocessing applications led to the development of innovative single-use products for downstream bioprocessing, especially chromatography columns and membrane adsorbers. However, scalability and high cost are major challenges for using single-use products in downstream bioprocessing, especially for purification bioprocessing.
