Single-use valves add ease and disposability to traditional valve formats.

Single Use diaphragm Valves are shut-off valves that use diaphragms as opening and closing elements to close the flow path, cut off fluid, and separate the internal cavity of the valve body from the internal cavity of the valve cover. This valve eliminates the burden of manual cleaning and reprocessing of difficult-to-clean parts, while providing excellent performance.

Single-use Pinch Valves (PV) are non-product contact valves matched to use on existing tubing to provide flow control and automation.

The global Single Use Valves market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
