## Abstracts

The global Sinterbrazing Paste market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Sinterbrazing paste is a new kind of composite brazing material. It is a paste mixed with brazing powder, flux and binder to form a paste capable of being screen printed onto a substrate or applied to the workpiece via a dispenser. Compared to conventional brazing materials, brazing paste is more suited for automatic application in large quantities. Moreover, their application dosage can be reproduced with high precision. When brazing paste is used with induction brazing, flame brazing, reflow soldering and other methods, extremely high production efficiency can be achieved. At the same time, gas release of brazing flux is relatively low, and braze quality is excellent.

United States market for Sinterbrazing Paste is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
