The research report highlights the growth potential of the global Sintered AlNiCo Permanent Magnet market. With recovery from influence of COVID-19 and the Russia-Ukraine War, Sintered AlNiCo Permanent Magnet are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Sintered AlNiCo Permanent Magnet. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Sintered AlNiCo Permanent Magnet market.

Sintered alnico permanent magnet is a kind of metal element composed of aluminum (Al), nickel (Ni), cobalt (Co), iron (Fe) and a small amount of copper (Cu), titanium (Ti) and niobium (Nb). permanent magnet alloy. Its Curie temperature can reach 890°C, and it has excellent temperature resistance, high temperature stability and corrosion resistance. Sintered alnico magnets are especially suitable for products with small size, light weight, thinness, irregular shape and high surface quality requirements. At the same time, sintered alnico magnets have high dimensional accuracy, small tolerances, and better mechanical strength and processing performance. From a production point of

view, compared with cast AlNiCo magnets, sintered AlNiCo magnets have higher material utilization, lower composition segregation and magnetic performance dispersion. The overall magnetic properties of sintered AlNiCo magnets are slightly lower than those of cast AlNiCo magnets, so they have not been widely used. Its main application fields include instrumentation, communication, magnetoelectric switches and sensors.
