A sintered bronze filter is a porous filtration device created by sintering bronze powder. This filter employs fine pores to trap particles in liquids or gases, ensuring effective filtration while promoting uniform gas or liquid flow. It is widely used across numerous sectors, such as in automotive for fuel and air filtration, in medical equipment like artificial kidneys and blood filters, in the food industry for beverage and oil filtration, and environmental applications for exhaust gas and water treatment.

Its construction involves bronze powder, a sintering furnace for the sintering process, and a durable filter casing. Distinguished by its precision in filtering minute particles, this filter boasts high pressure and temperature tolerance, corrosion resistance, and the capacity for cleaning and reuse, offering cost-effectiveness alongside its functional benefits.

The global Sintered Bronze Filter market size is projected to grow from US$ 845 million in 2024 to US$ 1207 million in 2030; it is expected to grow at a CAGR of 6.1% from 2024 to 2030.
