A sintered plate dust collector is a highly efficient air pollution control device, mainly used for the collection and removal of dust and fine particles generated in industrial production processes. Its working principle is to use a special sintered plate as a filter element. When the dust-laden gas passes through the sintered plate, the dust is intercepted on the surface or in the internal pores of the sintered plate, and the clean gas is discharged from the other side of the sintered plate. Sintered plates are usually made of metal or ceramic materials, with high mechanical strength, good wear resistance and corrosion resistance.

United States market for Sintered Plate Dust Collectors is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
