Sintered Zirconium Silicate Grinding Media are durable ceramic milling beads made by high-temperature sintering of zirconium silicate ( $ZrSiO_4$ ), offering a dense, uniform microstructure and excellent mechanical strength. These grinding media are widely used for fine and ultrafine grinding and dispersion in industries such as paints, coatings, inks, ceramics, and minerals. Known for their moderate density (typically around 3.8–4.2  $g/cm^3$ ), high sphericity, and good wear resistance, they provide a cost-effective solution for applications requiring consistent particle size reduction without excessive media contamination. Their balanced properties make them especially suitable for medium-viscosity materials in horizontal or vertical stirred mills.
