The global SiO₂ Aerogel Powder market size is predicted to grow from US\$ 1212 million in 2025 to US\$ 1647 million in 2032; it is expected to grow at a CAGR of 4.6% from 2026 to 2032.

SiO₂ aerogel powder is a porous solid material that exists as a white, fine powder. It boasts an extremely high porosity (typically ranging from 90% to 99.8%), an extremely low density (which can be as low as 0.003g/cm³), and an extremely low thermal conductivity. With uniform particle size distribution and controllable structure, it is currently one of the solid materials with the lowest density and the best thermal insulation properties. The particle size of aerogel powder generally ranges from nanometers to micrometers, and this small size gives it a large specific surface area, typically several hundred to thousands of square meters per gram. Based on particle size, it can be classified into nanoscale and microscale categories; and based on hydrophilic properties, it can be divided into hydrophilic and hydrophobic types.

United States market for SiO₂ Aerogel Powder is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for SiO₂ Aerogel Powder is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
