Siphon pumps are simple, manual pumping devices that utilize the principle of atmospheric pressure to transfer or dispense liquids from one container to another, relying on the force of gravity and the equilibrium of fluid levels to create a siphoning action. These pumps are commonly used for various liquid transfer and drainage applications, allowing users to efficiently move fluids, such as water, fuel, or chemicals, without the need for external power sources or complex mechanical components.

Manufacturers were focusing on enhancing the durability and chemical compatibility of siphon pumps, incorporating corrosion-resistant materials, chemical-resistant tubing, and reinforced pump components, to withstand the handling of various corrosive chemicals, fuels, and fluids, ensuring long-term reliability, safety, and performance in diverse industrial, automotive, and fluid transfer applications.
