Size exclusion chromatography (SEC), also known as gel filtration, is the mildest of all the chromatography techniques. SEC separates molecules by differences in size as they pass through a resin packed in a column. Unlike techniques such as ion exchange chromatography (IEX) or affinity chromatography (AC), molecules do not bind to the chromatography resin, which means that buffer composition does not directly affect resolution (the degree of separation between peaks). Consequently, a significant advantage of SEC is that conditions can be varied to suit the type of sample or the requirements for further purification, analysis, or storage without altering the separation.

The global market for Size Exclusion Chromatography Resin is estimated to increase from US\$ million in 2021 to reach US\$ million by 2028, exhibiting a CAGR of % during 2022-2028.
