The global Skewed Wheel Diverter market size is predicted to grow from US\$ 102 million in 2025 to US\$ 126 million in 2031; it is expected to grow at a CAGR of 3.6% from 2025 to 2031.

Skewed wheel diverters consist of a high-speed belt transportation conveyor with two rows of skewed wheels built into the belt unit at each divert point. When a carton reaches the divert destination, wheels raise above the conveying surface of the belt and steer the product off the sort line.

Due to the early application of logistics automation in developed countries in Europe and the United States, with long-term technology accumulation, foreign companies have accumulated great advantages in warehousing and logistics software and hardware technology, product quality, system stability, industry experience, and brand awareness. Manufacturing, airports and other industries occupy a relatively high market share. According to statistics, the top 20 global logistics system integrators in 2021 are all located in developed countries such as the United States, Europe, and Japan. Ranked second with US\$4.30 billion, Germany's SSI SCHAEFER ranked third with US\$3.73 billion, and other top-ranking companies include Honeywell, Vanderlande, Knap, Murata Machinery and other companies. Among them, Daifuku, Dematic, and SSI SCHAEFER entered the domestic market earlier and formed strong competitiveness.
