Integrated into a ski backpack or vest, a ski airbag system is comprised of an airbag and power source (either a canister of compressed air or gas). When a skier (or snowboarder, sledder, etc.) pulls the attached handle, the airbag inflates to about 150 liters around and behind her torso. In the event of a slide, the inflated airbag keeps the skier at or near the surface of the snow thanks to a process known as granular segregation (i.e. in a mixture, larger objects are more likely to stay at the top while smaller objects sink down).

The global Ski Airbag System market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.

The growing popularity of snow-related sports, trekking, skiing, and snow-related activities, and awareness about the use of avalanche airbags for safety purposes are driving the avalanche airbag market. As safety is the most important factor for the avalanche airbag market players, one of the major reasons for the adoption and awareness of the use of avalanche airbags is the increasing number of avalanche-related fatalities. There is always a huge demand for necessary safety gear among climbers, trekkers and adventure enthusiasts. This factor increases the demand for avalanche airbags, thereby increasing the growth opportunities for the manufacturers. The rise of skiing and snowboarding has also contributed to the growth of the avalanche airbag market. Avalanche airbags are increasingly needed for safety in skiing.
