## Abstracts

The global Skin Care App market size is predicted to grow from US\$ 1283 million in 2025 to US\$ 1874 million in 2032; it is expected to grow at a CAGR of 5.6% from 2026 to 2032.

To address the lack of professional knowledge, blind product selection, and difficulty in obtaining timely and scientific guidance for skin problems in daily skincare, skincare apps have emerged. Since the rise of mobile internet and the birth of skincare apps in the early 21st century, the digital health and beauty personal care field has developed significantly. Currently, skincare apps have evolved into various types, encompassing AI skin type detection, personalized skincare plan customization, product ingredient analysis, skincare check-in records, and online dermatologist consultations. They are widely used in home skincare, medical aesthetics assistance, beauty salon services, and skin health management, providing users with data-driven, intelligent, and 24/7 skin health monitoring and scientific care guidance.

Skincare apps are evolving from single tools into full-chain service platforms encompassing 'diagnosis-solution-purchase-tracking.' In the future, breakthroughs are needed in three dimensions: technological advancements (such as 3D bioprinted skin models), service innovation (such as customized skincare products), and ecological collaboration (data sharing among medical aesthetic institutions). This will allow companies to seize the incremental opportunities in the trillion-dollar beauty economy market amidst rising biosafety standards.
