The skin mechanics imager is a type of professional instrument that measures and analyzes the mechanical properties of the skin, such as elasticity, hardness, compressibility, etc., by applying mechanical principles. These instruments play an important role in the fields of medicine, cosmetology, and skin research. The main principle involves stimulating the skin and measuring its response, usually by applying pressure or adsorption to simulate the forces on the skin in a real environment. Future trends in skin mechanics imagers will focus on improving resolution and expanding functionality to more comprehensively assess the different mechanical properties of the skin. Typical products include Courage + Khazaka Electronic GmbH's Skin Elasticity Meter, DermaLab's DermaLab Combo, CK Technology's Reviscometer, etc.
