Stem cells have been an important discovery in recent years. Aesthetic medicine uses stem cells for rejuvenation therapies, wrinkle-?lling procedures (the so-called lipofilling) and for the treatment of alopecia (baldness). Stem cells are also successfully utilised in many other branches of medicine – in the treatment of joint diseases, spinal cord injuries and neurological conditions. Rejuvenation and lifting procedures using stem cells are amongst the most advanced and effective methods of reversing the ageing process. Stem cells smooth out wrinkles and lift sagging cheeks. The stem cell therapy makes discolorations and dilated pores disappear. These ‘wonder’ cells make patients look much more radiant and even several years younger.

The global Skin Regeneration Stem Cell Therapy market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
