The global SLC NAND Flash Memory With Xtacking Architecture market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Combining the Xtacking architecture with SLC NAND flash memory, that is, SLC NAND flash memory using the Xtacking architecture, means that this flash memory product not only has the high performance and high reliability characteristics of SLC NAND flash memory, but also achieves higher storage density and shorter product launch cycle through the Xtacking architecture. This combination gives the product a significant advantage in storage solutions that require high performance, high reliability and high density. SLC NAND flash memory using the Xtacking architecture is widely used in fields that require high storage performance, such as data centers, enterprise-level servers, high-end personal computers, mobile devices, automotive electronics, security monitoring, etc. These fields usually require fast data processing capabilities and high-reliability data storage solutions, and SLC NAND flash memory using the Xtacking architecture just meets these needs.

The Xtacking architecture is an innovative 3D NAND flash memory architecture adopted by manufacturers such as Yangtze Memory. It achieves higher integration and production efficiency by placing peripheral circuits under the NAND flash memory chip. This architecture helps to improve the performance and capacity of NAND flash memory while reducing production costs, making SLC NAND flash memory (each storage cell stores only one bit of data and has a high write and erase speed) more competitive in high-end storage needs. Due to its high performance and high stability, SLC NAND flash memory is widely used in fields with high storage performance requirements, such as automobiles, security, wearable devices, the Internet of Things (IoT), home

appliances, network communications, and industrial automation. With the promotion and application of the Xtacking architecture, the market share of SLC NAND flash memory products using this architecture in these fields is expected to further expand.
