APAP (Auto-Adjusting Positive Airway Pressure) machine is a type of continuous positive airway pressure (CPAP) machine used in the treatment of sleep apnea. Sleep apnea is a sleep disorder characterized by pauses in breathing or shallow breaths during sleep.

The APAP machine delivers a constant flow of pressurized air through a mask worn over the nose or mouth to keep the airway open and prevent the collapse of the throat muscles that cause sleep apnea. However, unlike traditional CPAP machines that deliver a fixed pressure, APAP machines automatically adjust the pressure levels throughout the night based on the individual's breathing patterns.

APAP machines use advanced algorithms and sensors to monitor the patient's breathing and adjust the pressure accordingly. This ensures that the patient receives the optimal pressure needed to keep the airway open, reducing the occurrence of apnea events and improving sleep quality.

The APAP machine is prescribed by a sleep specialist or physician after a sleep study and diagnosis of sleep apnea. It is typically used as a long-term treatment option for individuals with obstructive sleep apnea (OSA) or other types of sleep-disordered breathing.
