A sleeve applicator is a machine used in packaging and labeling processes to apply shrink sleeves or labels onto various products such as bottles, cans, jars, or containers. It is designed to accurately and efficiently apply sleeves or labels onto the product's surface, providing a secure and visually appealing packaging solution.

The sleeve applicator typically consists of a conveyor system that transports the products to the application area. The sleeves or labels are fed into the machine, where they are cut to the required length and then applied onto the product using heat or adhesive. The machine may use different mechanisms such as steam, hot air, or heat tunnels to shrink the sleeve tightly around the product, creating a tamper-evident seal.

Sleeve applicators are commonly used in industries such as food and beverage, pharmaceuticals, cosmetics, and household products. They offer benefits such as

enhanced product visibility, protection against tampering, and the ability to accommodate various container shapes and sizes.
