The global Slide Bearings With Flange market size is predicted to grow from US$ 2269 million in 2025 to US$ 3600 million in 2032; it is expected to grow at a CAGR of 7.0% from 2026 to 2032.

In 2024, global Slide Bearings with Flange output reached 18.4 billion pieces versus 23 billion in capacity, with average unit price USD 0.12, with manufacturers averaging a 30% gross margin. Slide Bearings with Flange are low-friction linear motion elements that combine a cylindrical sliding bushing with an integrated mounting flange (round, square, or oval) to allow easy bolt-on installation into machinery, providing smooth reciprocating or oscillating motion under radial loads. They are typically made from sintered bronze, PTFE-lined steel, polymer composites (POM, PA, UHMW-PE), or oil-impregnated metal sleeves, and the flange ensures axial positioning without additional retainers. The supply chain begins with upstream raw materials such as bronze powders, carbon steel tubing, PTFE resins, engineering plastics, and lubricants; midstream processes include powder metallurgy sintering, PTFE/metal composite lamination, precision machining, injection molding, and bushing/flange assembly; downstream stages involve OEM bearing makers and motion-system suppliers integrating flanged slide bearings into equipment such as automation machinery, packaging lines, conveyors, automotive linkages, medical devices, furniture mechanisms, and industrial tools.
