Slide shifters are sliding linear guides. The linear guides are called different names by different manufacturers, but all have the same basic principle. They are linear reciprocating guide units with excellent wear resistance, load resistance, and resistance to different physical properties. However, since the guides have no propulsive force, they are widely used in industrial equipment by combining them with other things.

Linear bushings are similar to linear guides, but the ball contacts the rail at a surface, whereas in linear bushings, the ball contacts the shaft at a point.

The global Slide Shifter market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
