The global Sliding Automatic Door market size is predicted to grow from US\$ 565 million in 2025 to US\$ 684 million in 2031; it is expected to grow at a CAGR of 3.2% from 2025 to 2031.

A sliding door is a type of door which opens horizontally by sliding, usually parallel to a wall. Sliding doors can be mounted either on top of a track below or be suspended from a track above. Some types slide into a space in the parallel wall in the direction of travel, rather than the door sliding along the outside of the parallel wall.

A sliding automatic door is a door that is automatically opened and closed by a device, usually consisting of a sensor, a motor and a control system. It can be automatically opened or closed according to the approach of pedestrians or vehicles, providing convenience and safety for people. Sliding automatic doors are usually equipped with sensors that can automatically sense the approach of pedestrians or vehicles, thereby realizing the function of automatically opening and closing the door. Due to the automatic operation, pedestrians can approach the door in a simple way without manually pushing, pulling or turning the door handle, which is more convenient. The sliding automatic door is equipped with a safety sensor, which can detect obstacles at the door in time to ensure the safe opening and closing of the door and avoid accidents. Sliding automatic doors are suitable for various places, such as shops, office buildings, hospitals, hotels, airports, stations, etc., providing convenience for a large number of people and vehicles.
