Slip roller is a sheet metal forming machine used to create curved shapes from flat metal sheets. This is accomplished by feeding a metal sheet through two or three rollers that are positioned symmetrically. The rollers are movable and can be adjusted to create specific radii or curves, depending on the application. The slip roller works by feeding a flat metal sheet through the rollers while the rollers turn to grip the sheet and form it into the desired shape. This shaping process can be repeated multiple times until the sheet metal has been completely formed into the required shape.
