A slipper clutch (also known as a back-torque limiter) is a specialised clutch with an integrated freewheel mechanism, developed for performance-oriented motorcycles to mitigate the effects of engine braking when riders decelerate.

The entry level segment that consists of motorcycles equipped with engines below 400cc, accounted for the major market shares and dominated this market. The heavy import duty imposed on company built units (CBUs) by developing countries such as India, will induce OEMs to open manufacturing units in the country and compete with local vendors and other international vendors with a price advantage over their entry-level and premium motorcycles equipped with slipper clutches. As a result, the shares of this market segment will increase during the next few years and this segment will

continue its market dominance throughout the predicted period.
