## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

The slot type optical interruptor integrates the light source and the matching photodetector in a relative direction, together with a supporting circuit, to determine in a binary (duplex) manner whether opaque objects or materials exist in the space between the transmitter and the receiver. Unlike transistor output devices with the same name, they simplify applications at the expense of application flexibility because they use additional receiver processing.

The global market for Slot Type Optical Interruptor is estimated to increase from US\$ million in 2021 to reach US\$ million by 2028, exhibiting a CAGR of % during 2022-2028. Keeping in mind the uncertainties of COVID-19 and Russia-Ukraine War, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.
