A slow cooker is a countertop electrical cooking appliance that cooks at a low temperature with optimum cooking time. The global slow cooker market includes manual and automatic types of slow cookers. Based on the capacity, the product is segregated into 0-1 gallon and above 1 gallon capacity cookers.

During 2017, the automatic segment accounted for the major shares and dominated this market. Automatic slow cookers need to be programmed once by adjusting cooking temperature and time and then they start cooking the ingredients. Additionally, slow cookers have higher growth opportunities because the product penetration is high since the product are sold through various distribution channels and optimum value proposition and brand equity. Factors such as the non-requirement of manual intervention will contribute to the growth of this segment in the slow cooker market during the next few years.
