Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Sodium lauryl sulfate (SLS) is also known as sodium laurilsulfate or sodium dodecyl sulfate. SLS is a highly effective surfactant and is employed in applications demanding elimination of oily stains and residues. Sodium lauryl ether sulfate (SLES), also known as sodium laureth sulfate, is a high foaming, anionic surfactant, which exerts emulsifying action, thus removing oil and soil from the hair and skin. Linear alkylbenzene sulfonate (LAS) is an anionic surfactant with molecules categorized as a hydrophilic and a hydrophobic group. The major raw material for producing LAS is LAB, manufactured by the alkylation of benzene with n-paraffins in the presence of hydrogen fluoride or aluminum chloride as catalyst. The report states that the demand for LAS is likely to be high in the coming years as it is an affordable material. LAS is also known to have excellent emulsifying, cleansing, and foaming properties, which is primarily the reason why it is used for making industrial and household detergents.

According to this study, over the next five years the SLS, SLES, and LAS market will register a xx% CAGR in terms of revenue, the global market size will reach US\$ xx million by 2024, from US\$ xx million in 2019.
