## Abstracts

The global Sludge Concentration Sensors market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The principle of the sludge concentration sensor is the combination of infrared absorption and scattered light. The ISO7027 method can be used to continuously and accurately measure the sludge concentration. The sludge concentration value is measured based on the ISO7027 infrared double scattered light technology without being affected by chromaticity. The self-cleaning function can be selected according to the use environment. The data is stable and the performance is reliable; the built-in self-diagnosis function ensures accurate data; installation and calibration are simple.

United States market for Sludge Concentration Sensors is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
