A Sludge Granulator is a piece of equipment used primarily in wastewater treatment processes to convert raw or partially treated sludge into more manageable, granular form. Sludge, which is a byproduct of various industrial and municipal wastewater treatments, contains a mixture of water, organic matter, inorganic substances, and microorganisms. Granulation transforms this otherwise difficult-to-handle sludge into more stable, dense, and easier-to-dewater pellets or grains, facilitating further processing, storage, transportation, and disposal or reuse.

The global Sludge Granulator market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
