Sludge Treatment Incinerators are specialized facilities designed to thermally treat and dispose of sewage sludge or other types of industrial sludge. These incinerators use high temperatures to reduce the volume of sludge and destroy pathogens, organic compounds, and potentially toxic substances present in it. The process typically involves drying the sludge first and then burning it in a controlled environment, which results in a significant reduction of the original mass and volume of the waste material.

The global Sludge Treatment Incinerators market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
