A slurry concentration meter is an instrument used for real-time measurement of slurry concentration (i.e. the content of mineral particles in a liquid). The slurry concentration is a very important parameter in industries such as ore processing, beneficiation, metallurgy, and chemical engineering, which directly affects subsequent processing processes such as flotation, settling, and filtration. The main function of the slurry concentration meter is to accurately measure the concentration of solid particles in the slurry, helping operators monitor changes in the slurry in real time, in order to take appropriate control measures and optimize the production process.
