A slurry sampler is a device used to collect representative samples of slurry, which is a mixture of solid particles and liquid. Slurries are commonly found in industries such as mining, wastewater treatment, and food processing.

The slurry sampler typically consists of a sampling probe or tube that is inserted into the slurry to collect a sample. The probe is designed to minimize disturbance to the slurry and ensure that the collected sample is representative of the overall mixture.

Once the sample is collected, it can be analyzed for various purposes such as quality control, process optimization, or laboratory testing. Slurry samplers are often used in conjunction with other equipment such as pumps, valves, and flow meters to facilitate the sampling process.
