The global Small Bench Centrifuges market size is predicted to grow from US\$ 67.86 million in 2025 to US\$ 104 million in 2032; it is expected to grow at a CAGR of 6.3% from 2026 to 2032.

A small bench centrifuges refers to a centrifugal device with a small volume that can be directly placed on an experimental table. It is mainly driven by a motor to rotate the rotor at high speed, allowing the sample to settle, clarify, stratify, concentrate, briefly centrifuge, and undergo pre-treatment under centrifugal force. Common types include micro desktop centrifuges, low-speed desktop centrifuges, high-speed desktop centrifuges, cryogenic desktop centrifuges, multifunctional rotor desktop centrifuges, and small capacity clinical desktop centrifuges. It is mainly used in life science research, molecular biology experiments, clinical testing, PCR sample processing, blood sample separation, cell culture, protein analysis, food safety testing, environmental testing, and teaching experiments. In 2025, global Small Bench Centrifuges production reached approximately 194,867 Units, with an average global market price of around US\$ 356 per unit.

small bench centrifuges belong to the segmented products with stable demand and high update frequency in laboratory basic equipment. The market growth mainly comes from investment in life science research, popularization of molecular diagnostics, improvement of clinical testing capabilities, construction of teaching laboratories, expansion of food safety testing, and upgrading of enterprise R&D laboratory configurations. In the future, the focus of competition will be on high-speed, silent, intelligent control, refrigeration and temperature control, miniaturized structure, multi rotor compatibility, safety interlocking, and low maintenance design. The price competition for low-end general-purpose models will still be more obvious, and

manufacturers with stable motor control, precision rotor processing, safety certification, and application scenario adaptation capabilities are more likely to obtain stable orders.
