Climate Chambers are environmental testing devices used for various types of testing such as prototype evaluation, research & development testing, production testing, accelerated stress testing, reliability testing, failure analysis, and any other application where environmental simulation is needed.

An environmental test chamber artificially replicates the conditions under which machinery, materials, devices or components might be exposed. It is also used to accelerate the effects of exposure to the environment, sometimes at conditions not actually expected.

A Benchtop Environmental Chamber offers flexibility, uniformity, and control accuracy required for cost-effective environmental testing.
