According to this study, the global Small Cell 5G Network market size will reach US\$ 7368 million by 2031.

Small cells are low power, short range wireless transmission systems (base stations) to cover a small geographical area or indoor / outdoor applications. However, small cells have all the basic characteristics of a conventional base stations and it is capable of handling high data rate for individual users. In LTE advanced and 5G deployments, small cells will play a significant role to efficiently deliver high speed mobile broadband and other low latency applications.

5G is a key and cross-age technology that opens the era of the Internet of Everything, and all countries are grabbing market share. The Global Mobile Economy Development Report 2023 released by GSMA Intelligence pointed out that by the end of 2022, the number of global mobile users would exceed 5.4 billion. The mobile ecosystem supports 16 million jobs directly and 12 million jobs indirectly.

China is a leader in 5G technology. According to the latest statistics from the Ministry of Industry and Information Technology, China newly added 887,000 5G base stations in 2022 (currently reaching 2.312 million, accounting for more than 60% of the world's total), and 110 cities in China have reached gigabit city construction standard. According to the Digital China Development Report (2022) released by the State Internet Information Office, by the end of 2022, China had built a total of 2.312 million 5G base stations, with 561 million 5G users, accounting for more than 60% of the world.
