The global Small Edge Data Center market size is projected to grow from US$ million in 2022 to US$ million in 2029; it is expected to grow at a CAGR of % from 2023 to 2029.

Edge data centers are small data centers that are close to users and provide low latency services. Therefore, companies choose to build edge data centers rather than traditional data centers.

The growing demand for streaming services, the growing use of Internet of Things devices and their strength in the healthcare industry have accelerated the demand for edge computing data centers. This leads to the need for more marginal data centers to provide low latency services to users.

The expected future growth in the number of self-driving cars opens up opportunities for fringe data centers. Leading vendors are investing in R&D activities to launch advanced edge computing and Internet of Things solutions to meet the growing edge data center market demand.
