The global Small Interfering RNA (siRNA) Drugs market size is predicted to grow from US\$ 2498 million in 2025 to US\$ 14030 million in 2032; it is expected to grow at a CAGR of 28.5% from 2026 to 2032.

Small Interfering RNA (siRNA) drugs are a class of nucleic acid-based therapeutics that utilize short RNA molecules to silence or regulate the expression of specific genes. These drugs have the ability to interfere with the translation of messenger RNA (mRNA) into proteins, effectively "silencing" the gene associated with that mRNA. SiRNA-based therapies have the potential to treat a variety of diseases, particularly those with a genetic or RNA-based component.

The Small Interfering RNA (siRNA) Drugs Market is driven by the transformative potential of siRNA-based therapies in silencing disease-associated genes, making them a promising approach for treating a wide range of diseases, including genetic disorders, viral infections, and various cancers. siRNA drugs work by selectively degrading or inhibiting the expression of specific genes, offering a highly targeted and personalized treatment option. As the understanding of genomics and RNA interference mechanisms advances, and the need for precision medicine grows, the demand for siRNA drugs continues to rise. Innovations in siRNA design, delivery systems, and gene-editing technologies further contribute to market expansion. However, a significant challenge for this market is the need to overcome delivery barriers, ensure the stability and safety of siRNA therapeutics, and navigate regulatory complexities. Addressing off-target effects, optimizing pharmacokinetics, and managing the high cost of siRNA drug development are ongoing challenges. Additionally, the market faces competition from traditional therapeutic approaches and the need for continuous research and development to unlock the full therapeutic potential of siRNA drugs. Striking a balance

between providing safe, effective, and accessible siRNA therapies while addressing scientific and regulatory challenges is essential for the continued growth of the Small Interfering RNA (siRNA) Drugs Market.
