OEM (Original Equipment Manufacturer) and ODM (Original Design Manufacturer) are two common production cooperation models in the small kitchen appliance industry. The OEM model means that brand manufacturers do not directly produce products, but use their own key core technologies to design and develop new products and control sales channels. The specific processing tasks are entrusted to other manufacturers of similar products with production capacity through contract orders. In this model, the manufacturer (OEM manufacturer) is responsible for the production of the product, while the brand manufacturer is responsible for the design, quality control, marketing and after-sales service of the product. The ODM model means that the manufacturer designs and produces products for customers according to their needs, and then marks the customer's brand or trademark on the product. In this model, the manufacturer is not only responsible for the production of the product, but also undertakes tasks such as product design, technical support, and after-sales service. The OEM/ODM models of small kitchen appliances have their own characteristics. Manufacturers and customers can choose the appropriate cooperation model according to their own conditions and market demand. In future development, intelligence, customization, quality improvement and channel expansion will be important development trends of OEM/ODM of small kitchen appliances.
