The small magnetic levitation artificial heart is a miniaturized heart assist device driven by magnetic levitation technology. It achieves frictionless operation through a non-contact levitation rotor, effectively reducing mechanical wear and blood damage, and is used for long-term assistance or partial replacement of the heart's pumping function. The device usually has the characteristics of small size, low noise, and good blood compatibility. It is suitable for patients with end-stage heart failure as a bridge treatment or long-term replacement for heart transplantation, representing the development direction of a new generation of artificial heart technology.
