According to our LPI (LP Information) latest study, the global Small Modular Reactors (SMRs) market size was valued at US\$ 3537.4 million in 2023. With growing demand in downstream market, the Small Modular Reactors (SMRs) is forecast to a readjusted size of US\$ 9035.9 million by 2030 with a CAGR of 14.3% during review period.

The research report highlights the growth potential of the global Small Modular Reactors (SMRs) market. Small Modular Reactors (SMRs) are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Small Modular Reactors (SMRs). Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Small Modular Reactors (SMRs) market.

Small modular reactors (SMRs) are a type of nuclear fission reactor which are smaller than conventional reactors, and manufactured at a plant and brought to a site to be assembled. The International Atomic Energy Agency (IAEA) defines 'small' as under 300 MWe. This report focus on Small modular reactors (SMRs) market.

As a SMR is fully built in a factory using module fabrication, high production rate can be achieved. SMRs are still in the design phase. In fact, only three SMRs are currently in the advanced regulatory phase: NuScale's Power Module, GE-Hitachi's BWRX 300, and Terrestrial Energy's Integral Molten Salt Reactor. SMRs can be made to operate underground or as a floating nuclear power unit. Modular reactors are primarily used for

electricity generation; however, it is also used in seawater desalination and process heating. SMR designs promises an affordable, safe, viable, and non-greenhouse gas emitting energy.
