A Small Molecule Chromatography System is a specialized analytical tool used to separate, identify, and purify small organic molecules, typically with molecular weights less than 900 Da. These systems are widely used in pharmaceutical research, chemical analysis, and biotechnology for tasks such as drug discovery, compound identification, and quality control. Small molecule chromatography relies on techniques like high-performance liquid chromatography (HPLC), gas chromatography (GC), or ion-exchange chromatography to achieve high-resolution separation based on molecular properties like size, polarity, and charge. These systems are crucial for analyzing complex mixtures, purifying active ingredients, and ensuring the purity and potency of compounds, especially in pharmaceutical development and production.
