Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Small molecule prefilled syringes are pharmaceutical preparations of small molecule drugs that are sold in prefilled syringes. Small molecule prefilled syringes are alternatives to other dosage forms such as tablets and capsules. Empty glass or plastic and polymer syringes are filled with the solution of the active pharmaceutical ingredients.

Drugs belonging to categories such as cardiovascular, analgesics, neurology, and adjuvants are offered in prefilled syringe delivery systems. Small molecule prefilled syringes have faster therapeutic action as compared to tablets and capsules, as drug directly enters into the bloodstream.

Moreover, self-administration can be done with the help of these products, which is convenient for the patients.
