The global Small Motor Gliders market size is predicted to grow from US\$ 489 million in 2025 to US\$ 973 million in 2032; it is expected to grow at a CAGR of 10.4% from 2026 to 2032.

A Small Motor Glider is a fixed-wing aircraft equipped with an engine and propeller that allows it to take off and climb under its own power, but which is also capable of sustained soaring flight without engine power. Under international aviation standards (such as EASA or FAA), they are typically categorized as 'Touring Motor Gliders' (TMG) or 'Self-Launching Sailplanes.' The engine is often designed to be retracted into the fuselage or feathered during gliding to minimize aerodynamic drag. This hybrid capability provides pilots with the independence of a powered airplane while maintaining the aerodynamic efficiency and silent flight experience characteristic of a traditional sailplane.

In 2025, global Small Electric Glider production reached approximately 10,000 units, and average price was 50,000 usd/unit.
