The predecessor of the odor sensor is the gas sensor. The main principle of the gas sensor is to convert the pressure of the gas into a corresponding electrical signal, which is widely used in fire warning. Odor sensor is much more complicated than gas sensor. It is an in-depth study of the olfactory recognition process by scientists. It is a sensing system that recognizes odor by simulating animal olfactory organs, also known as 'electronic nose'.

In the past few years, the price of Portable Odor Sensor Meters shown an increasing trend. However, as the improvement of energy, transportation costs, employee wages, and equipment depreciation will play a significant role in promoting the cost of Portable Odor Sensor Meters. Therefore, to some extent, the companies are facing a risk of profit decline.

Companies are focusing on technological innovation, equipment upgrades, and process improvements, to reduce costs and improve quality. The total concentration of the global Portable Odor Sensor Meters market will keep in the short run, while the market is going to be more concentrated for high end Portable Odor Sensor Meters.
