## Abstracts

According to this study, the global Small RNA Sequencing Service market size will reach US\$ 1890 million by 2031.

Small RNA Sequencing Service is a next-generation sequencing (NGS)-based molecular biology service designed for the comprehensive profiling and analysis of small RNA molecules, including microRNAs (miRNAs), small interfering RNAs (siRNAs), and PIWI-interacting RNAs (piRNAs). The service involves total RNA extraction from tissues, cells, or body fluids, construction of small RNA libraries, high-throughput sequencing, and bioinformatics analysis for quantification, identification, and functional annotation. It is widely applied in gene regulation studies, biomarker discovery, developmental biology, oncology, and pharmaceutical research. Compared to traditional detection methods, small RNA sequencing offers higher sensitivity, broader dynamic range, and the ability to discover novel small RNAs without prior sequence knowledge. A high-quality service typically includes RNA quality assessment, library preparation, sequencing, differential expression analysis, target prediction, and pathway enrichment, making it a powerful tool for non-coding RNA research and transcriptomics.

United States market for Small RNA Sequencing Service is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
