The global Small Satellite market size is predicted to grow from US\$ 1423 million in 2025 to US\$ 4188 million in 2031; it is expected to grow at a CAGR of 19.7% from 2025 to 2031.

Small satellites are satellites of low mass and size, usually under 500 kg (1,100 lb). While all such satellites can be referred to as 'small', different classifications are used to categorize them based on mass. Satellites can be built small to reduce the large economic cost of launch vehicles and the costs associated with construction. Miniature satellites, especially in large numbers, may be more useful than fewer, larger ones for some purposes – for example, gathering of scientific data and radio relay.

Global Small Satellite key players include Lockheed Martin, Northrop Gruman, Raytheon, etc. Global top three manufacturers hold a share about 50%.

United States is the largest market, with a share over 70%, followed by Europe and China, both have a share about 25 percent.

In terms of product, Nanosatellite is the largest segment, with a share over 50%. And in terms of application, the largest application is National Security, followed by Commerce.
