According to our LPI (LP Information) latest study, the global Small Single-Rotor and Multi-Rotor Wind Turbines market size was valued at US\$ 6067.6 million in 2023. With growing demand in downstream market, the Small Single-Rotor and Multi-Rotor Wind Turbines is forecast to a readjusted size of US\$ 8704.5 million by 2030 with a CAGR of 5.3% during review period.

The research report highlights the growth potential of the global Small Single-Rotor and Multi-Rotor Wind Turbines market. Small Single-Rotor and Multi-Rotor Wind Turbines are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Small Single-Rotor and Multi-Rotor Wind Turbines. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Small Single-Rotor and Multi-Rotor Wind Turbines market.

Small single-rotor and multi-rotor wind turbines are types of wind turbines designed for smaller-scale applications, such as residential, commercial, or community use. Unlike large-scale wind turbines commonly seen in wind farms, which can have rotor diameters of several meters, small wind turbines are designed to be more compact and suitable for installation in areas with limited space or lower wind speeds.

According to the Global Wind Report 2023 released by the Global Wind Energy Council, by 2024, the newly installed capacity of global onshore wind power will exceed 100GW

for the first time; by 2025, the newly installed capacity of global offshore wind power will also reach 25GW. In the next five years, the newly added grid-connected capacity of wind power will reach 680GW. The report also shows that the United States and Europe may experience a supply bottleneck of wind turbines and components in 2025. It recommends that national policymakers take immediate action to increase investment in supply chains to meet their rapid growth in demand and avoid supply chain bottlenecks hindering the development of wind power. In addition, according to Wood Mackenzie statistics, China is the largest and fastest-growing market for wind power generation in the world, accounting for more than half of the market share. Data from the National Energy Administration of China also shows that China's installed wind power capacity ranks first in the world, with a capacity of nearly 400 million kilowatts.
