The global Small Size Integrated Molding Choke market size is predicted to grow from US\$ 3145 million in 2025 to US\$ 6154 million in 2032; it is expected to grow at a CAGR of 10.7% from 2026 to 2032.

Small-size integrated molding chokes generally refer to power inductors whose form factors have entered the miniature surface-mount range and that are manufactured by integrally molding a wound coil together with metallic magnetic materials. In essence, they are miniaturized power inductors designed for power management applications. Their core structure typically consists of an internal coil, metal magnetic powder or metal alloy magnetic material, and terminal electrodes formed into an integrated body. Compared with conventional ferrite wire-wound inductors, these products offer several key advantages, including higher current-carrying capability per unit volume, lower DC resistance, and better DC bias characteristics, while also providing lower magnetic leakage and stronger mechanical integrity. As a result, they are better suited to end-use devices where space and thickness are constrained and where power conversion efficiency is critical. Such products are continuing to evolve toward smaller footprints and lower profiles, and are primarily used in buck, boost, and voltage regulation modules for smartphones, wearable devices, true wireless stereo earphones, augmented reality and virtual reality devices, tablets, notebook computers, camera modules, and other high-density portable electronic devices. For downstream customers, the value of small-size integrated molding chokes lies not only in size reduction, but also in their ability to balance high current capacity, low loss, low noise, and high reliability within limited PCB area, thereby supporting the broader industry trend toward thinner, more highly integrated, and longer-lasting end devices. Accordingly, these products are generally positioned within the high-end miniaturized power inductor segment, with the main technical barriers concentrated in magnetic

material formulation, coil design, molding processes, loss control, and the ability to maintain balanced performance as device dimensions continue to shrink.

In 2025, global shipments of small-size integrated molding chokes exceeded 22 billion units, with an average ex-factory price of approximately US\$146 per thousand units.

United States market for Small Size Integrated Molding Choke is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
