The global Small Tower Grain Dryer market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

The small tower grain dryer is a piece of equipment used to dry grain efficiently. It mainly consists of five working sections: storage section, drying section, slow drying section, cooling section and grain unloading section. It adopts a tower structure and can continuously dry a large amount of grain. It is widely used in the grain drying process in agricultural production.

The small tower grain dryer can speed up the drying speed of grain, reduce the moisture content of grain, and improve the quality and storage stability of grain. At the same time, it can also reduce problems such as mildew and insect damage, ensuring food safety and hygiene.
