A smart astronomical telescope is a telescope that incorporates advanced technology and features to enhance the user experience and provide additional functionality. These telescopes often have built-in computer systems and connectivity options, allowing users to control the telescope remotely, access databases of celestial objects, and even receive real-time updates and notifications. Smart astronomical telescopes can automatically track celestial objects as they move across the sky, eliminating the need for manual adjustments. These telescopes have a database of celestial objects, allowing users to select an object of interest and have the telescope automatically point towards it. Many smart astronomical telescopes can be controlled using a smartphone or tablet, with dedicated apps that provide a user-friendly interface for adjusting settings and navigating the night sky.

The global Smart Astronomical Telescope market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
